## PROBLEMS IDENTIFIED AND ANALYSES OF THE PROBLEMS

### PROBLEMS IDENTIFIED AND ANALYSES OF THE PROBLEMS

The major problems that have been identified by literature review in many rural areas are poverty, illiteracy, unemployment, homelessness, crime, social evils, lower living standards, lack of facilities, services, and health

Here is a look at the problems of villages:

- **Poor Infrastructure** – The infrastructure in villages is not good. The roads are not built properly and this hampers their connectivity with towns and cities which is a hindrance in establishing good business. Schools and hospitals in the villages lack good staff as well as facilities. Many villages do not have a power supply or face a lot of power cuts. Communicating with people living in other areas can also get quite difficult for the villagers due to poor telecom infrastructure in these areas. Sanitation is another grave problem in villages.
- **No Importance to Education** – Many villages do not have schools. Thus, people in villages do not get a chance to seek education. Even those villages that do have schools do not see much attendance as people in villages do not understand the importance of education. They engage their children in household activities or farming just to have helping hands.
- **Patriarchal Structure** – In villages, men are considered to be the head of the family and the women in the house must follow their instructions. All the decisions are taken by the male members of the family. Women are mostly confined only to the kitchen and other household chores. They are not allowed to go out and work. They cannot even express their feelings or opinions about anything. The cases of female feticide in the Indian villages are also quite high.

In our village everything is fine according to development there are well structured Educational Institutions, Highly equipped Hospitals, Devotional Temples, Proper managed Gram Sachvalayam and Dignified workers are achieving implementation in the village.

Even though there are so many implementations, our village is a step backward in doing works as per officers irregularity and people irresponsibility towards the nature and the polluted areas such as garbage's are not taken care by the Sanitary workers on time. So some people are facing related infections. So as the Health is the most prior thing that is to be achieved in the society, some more care need to be taken for the Sustainable Health and Wealth of the Livings...

Short term and long term action plan for possible solutions for the problems identified and that could be recommended to the concerned authorities for implementation

Here are the solutions to the problems faced by the people living in villages:

**Education should be Made Compulsory** – The government must make education compulsory for everyone. Good schools should be opened in villages and the government should ensure that no child in any village remains uneducated.

**Adult Education** – Adult education should also be promoted. Night schools must be opened for this purpose and adults must be encouraged to seek education. This is of utmost importance as only when the adults are educated they would understand the importance of education and educate their children.

**Power Supply a Must** – In today's times, it is impossible to grow and develop a region if there is no power supply or constant power cuts. This is one of the most basic things needed to progress in any field. Thus, the government must ensure that people in villages are not devoid of it.

**Sanitation Facility** – In order to maintain proper hygiene and good health, it is essential to have good sanitation facility. The government must promote the need to have a good sanitation facility and must also ensure each village has it.

**Better Healthcare Facilities** – There is a dire need to provide good healthcare facilities in every region. The government must ensure that every village is equipped with good hospitals and well educated and experienced healthcare staff
